

ZZAIR-CP/C

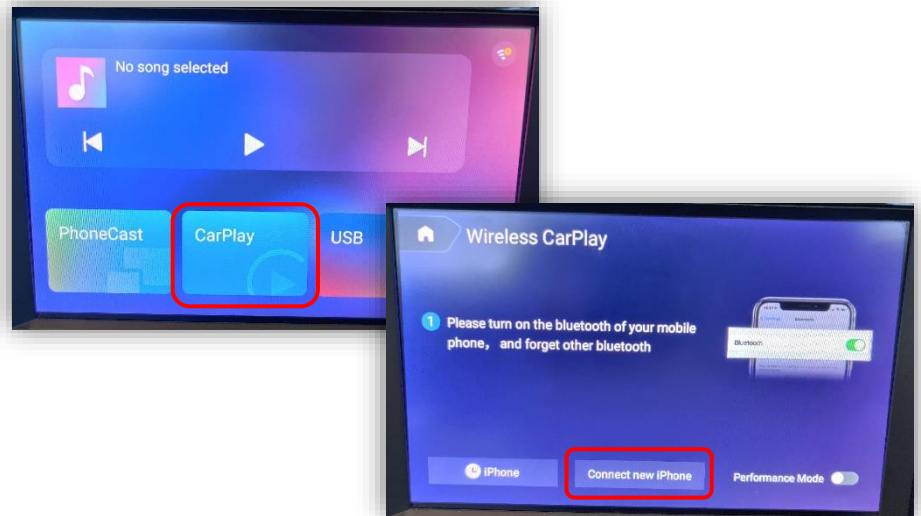

Thank you for purchasing a genuine ZZAIR-CP/C module! This unit converts wired OE CarPlay to wireless (USB-C connection) with automatic reconnection, and will wirelessly screen-cast for iPhone or Android. *Android Auto wired to wireless conversion is not supported with this unit.* **NOTE: this unit will only work with models that are equipped with OE CarPlay.**

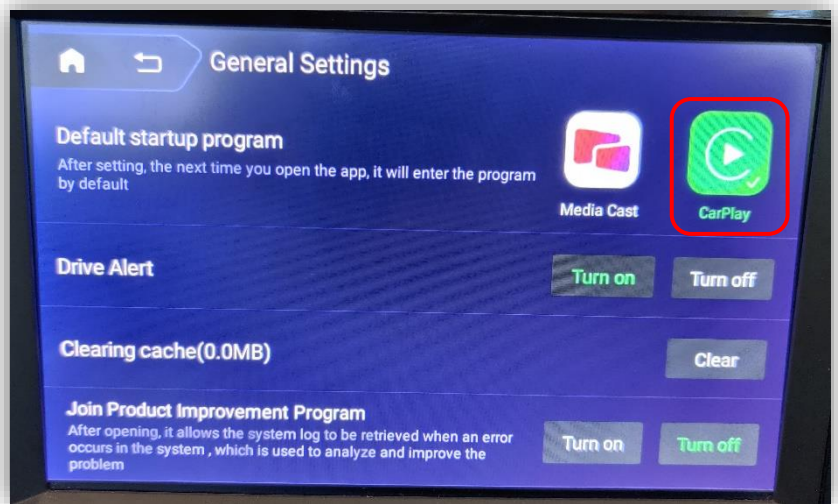

Connect provided USB-C cable to the ZZ-Air unit, connect the other end to the USB-C connector in the vehicle. Connection and initialization may take a few minutes – this process only needs to happen one time.

Once the ZZ-Air GUI loads, the unit must be paired to the iPhone for CarPlay use. Follow procedure below:

Select 'CarPlay'. If this is the first time connecting this iPhone, select 'Connect new iPhone'. This will begin the wireless registration process. Follow the on screen prompts. Be patient during this process.

Once the module is working properly, if auto-repair is desired (after key cycle), this must be activated inside the menu settings of the unit. If in CarPlay mode, select 'Media Cast' to exit into the ZZ-Air main menu. Now swipe left and select 'Settings' > 'General Settings' to access the menu shown (right). Set 'Default startup program' to be 'CarPlay'. Cycle the key once (with patience) to verify auto-repairing functionality.

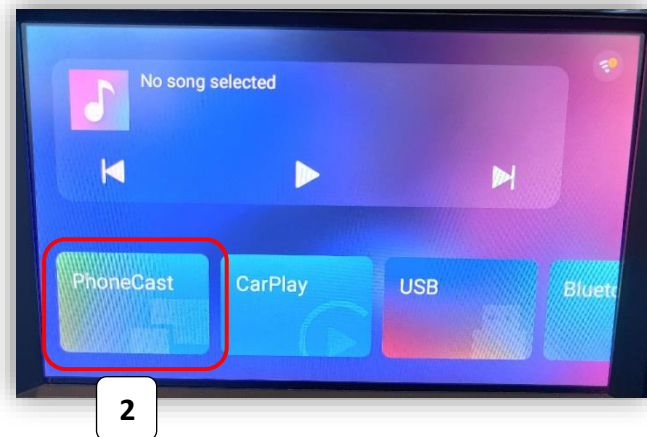

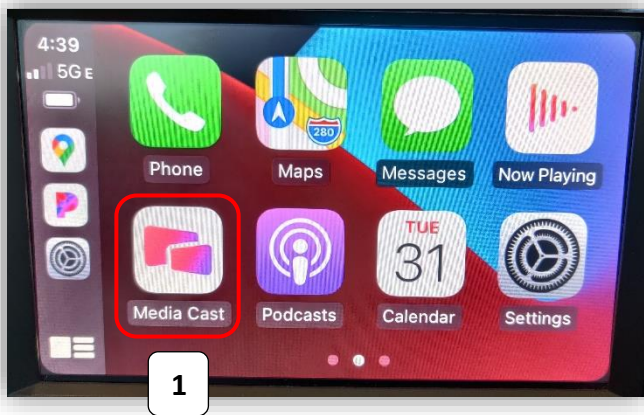

ScreenCast

Follow the steps below for screen casting (Apple & Android):

1. Exit to the ZZAIR main menu (if in CarPlay) by choosing 'MediaCast'.
2. Choose 'PhoneCast' to prepare the module for screen-casting.

3. Once in the Cast GUI, choose 'Phone Screen'
 - a. On the cell phone, turn on **Screen Cast** (note – the location of this toggle/app may be different on each handset)
 - b. Search for Smart_69AY and connect to it. Within a few seconds, the phone's GUI should appear on the screen.
